

Ecosystem and Vegetation Restoration

J.S. Held provides experienced environmental professionals that are committed to restoring and maintaining all aspects of the ecosystem impacted by projects and development. Our years of experience in minimizing environmental risks across a broad spectrum of sectors has allowed us to see first-hand the vulnerability of our natural resources and their susceptibility to the impacts of construction, right-of-way work, and urban development. To minimize the ecological disturbance, our expert environmental team is ready to provide a variety of services in all aspects of ecosystem management, specializing in vegetative, wetland, and wildlife habitat restoration.

From restoring an ecological community after an emergency response incident to devising a corporate initiative to expand or enhance greenspaces, we are dedicated to assisting your company in a variety of ecosystem restoration services.
